**Notice to Candidate.** The work you submit for assessment must be your own. If you copy from someone else or allow another candidate to copy from you, or if you cheat in any other way, you may be disqualified.

**Candidate Declaration.** I have read and understood the Notice to Candidate and can confirm that I have produced the attached work without assistance other than that which is acceptable under the scheme of assessment.

---

**AQA General Certificate of Education**

**Advanced Subsidiary Examination**

**June 2014**

**Biology BIO3X**

**Unit 3X AS Externally Marked Practical Assignment**

**Written Test**

**For submission by 15 May 2014**

---

**For this paper you must have:**
- the Task Sheet 2, your results and your graph
- a ruler with millimetre measurements
- a calculator.

**Time allowed**
- 1 hour 15 minutes

**Instructions**
- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- Do all rough work in this book. Cross through any work you do not want to be marked.

---

**Information**
- The marks for questions are shown in brackets.
- The maximum mark for this paper is 30.
- You will be marked on your ability to:
  - use good English
  - organise information clearly
  - use scientific terminology accurately.

---

**Details of additional assistance (if any).** Did the candidate receive any help or information in the production of this work? If you answer yes give the details below or on a separate page.

Yes ☐ No ☐

---

**Teacher Declaration:**

I confirm that the candidate has met the requirements of the practical skills verification (PSV) in accordance with the instructions and criteria in section 3.8 of the specification.

---

**Practical Skills Verification**

Yes ☐

---

As part of AQA’s commitment to assist students, AQA may make your coursework available on a strictly anonymous basis to teachers, examining staff and students in paper form or electronically, through the Internet or other means, for the purpose of indicating a typical mark or for other educational purposes. In the unlikely event that your coursework is made available for the purposes stated above, you may object to this at any time and we will remove the work on reasonable notice. If you have any concerns please contact AQA.

To see how AQA complies with the Data Protection Act 1988 please see our Privacy Statement at aqa.org.uk.
Section A

These questions relate to your investigation into water movement by capillary action. Use your copy of Task Sheet 2, your results and your graph to answer the questions. Answer all questions in the spaces provided.

9 Table 2 shows how to make up 30 cm³ of one of the salt solutions you used.

Complete Table 2 by giving all headings, units and the concentration of the salt solution produced.

[2 marks]

Table 2

<table>
<thead>
<tr>
<th>Concentration of salt solution / ..................</th>
<th>Volume of 1 mol dm⁻³ salt solution / cm³</th>
<th>9</th>
<th>21</th>
</tr>
</thead>
</table>

10 You were using the capillary tube as a model for water movement in a plant.

10 (a) Suggest two reasons why this is a good model for water movement in the xylem.

[2 marks]

1 ..........................................................................................................................................

............................................................................................................................................

2 ..........................................................................................................................................

............................................................................................................................................
10 (b) Suggest two reasons why this is a poor model for water movement in a plant. [2 marks]

1 ........................................................................................................................................
........................................................................................................................................

2 ........................................................................................................................................
........................................................................................................................................

11 You were told to leave the capillary tubes for 30 seconds before measuring how far the coloured water had moved (step 4).
Why was this an appropriate length of time to leave the tubes? [1 mark]
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
A student carried out a similar investigation to you. She used capillary tubes and celery stems. She placed capillary tubes and celery stems in red-coloured water and red-coloured salt solutions of different concentrations. After 5 minutes, she measured how far these liquids had moved up the capillary tubes and the xylem in the celery stem.

Her results are shown in Figure 2.

**Figure 2**

<table>
<thead>
<tr>
<th>Concentration of red-coloured salt solution / mol dm$^{-3}$</th>
<th>Distance moved by red-coloured liquid / mm</th>
</tr>

Turn over for the Resource Sheet
Resource Sheet

Introduction

In many parts of the world, crops have to be watered to grow enough food but fresh water is often in short supply.

Resource A

Barley is a plant that grows a leafy shoot and then produces seed that is harvested for food.

Scientists investigated whether barley could be grown successfully using fresh water mixed with seawater. This would reduce the use of fresh water. However, seawater contains dissolved sodium chloride (salt).

The scientists grew barley in plots of equal size in the same large field. Each plot received one of four treatments.

A. No watering.
B. Watering with fresh water during growth and seed production.
C. Watering with a 1:1 mix of fresh water and seawater during growth and seed production.
D. Watering with fresh water during growth and with a 1:1 mix of fresh water and seawater during seed production.

At the end of the investigation, the scientists measured the concentration of salt in the soil in each plot and the yield of barley seed harvested from each plot.

The scientists’ results are shown in Table 3.

<table>
<thead>
<tr>
<th>Watering treatment</th>
<th>Mean concentration of salt in soil / arbitrary units</th>
<th>Mean yield of barley seed / g</th>
</tr>
</thead>
<tbody>

<td>13.5</td>
<td>538</td>
</tr>
<tr>
<td>D</td>
<td>11.6</td>
<td>695</td>
</tr>
</tbody>
</table>
Resource B

Many groups of researchers have investigated a possible link between the amount of salt in people’s diet and high blood pressure. One scientist collected together their results and plotted them, as shown in Figure 3. Each point on Figure 3 represents the result for one large population.

### Section B

Use the information in the **Resource Sheet** and your own knowledge to answer the questions.

**Answer all** questions in the spaces provided.

<table>
<thead>
<tr>
<th>Question</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>14</strong></td>
<td>Watering treatment was the independent variable in this investigation. Explain what is meant by the <em>independent</em> variable.</td>
</tr>
<tr>
<td></td>
<td>[1 mark]</td>
</tr>
<tr>
<td><strong>15</strong></td>
<td>The same variety of barley was used in all the plots. Why was this important?</td>
</tr>
<tr>
<td></td>
<td>[2 marks]</td>
</tr>
<tr>
<td><strong>16</strong></td>
<td>When barley plants are growing, the number of cells increases. Name the process that increases the number of cells.</td>
</tr>
<tr>
<td></td>
<td>[1 mark]</td>
</tr>
</tbody>
</table>
### Question 17
What do the data in **Table 3** show about the effect of watering barley with a mixture of fresh water and seawater?

**[2 marks]**

<p>| | |</p>
<table>

**Turn over for the next question**
Use Resource B to answer Questions 19 to 23.

19 In order to calculate mean intake of salt per day for one of the populations, a measurement of each person's salt intake was taken for one 24-hour period. Why may this not give a reliable measurement for each person's salt intake? [1 mark]

............................................................................................................................................
............................................................................................................................................
............................................................................................................................................

20 The number of people in the sample was not the same for each population. Does this matter when comparing results for different populations? Explain your answer. [1 mark]

............................................................................................................................................
............................................................................................................................................
............................................................................................................................................

21 Can you conclude from these data that high salt intake increases a person's risk of high blood pressure? Explain your answer. [3 marks]

............................................................................................................................................
............................................................................................................................................
............................................................................................................................................
............................................................................................................................................
