Paper 1 Problem Solving

MARK SCHEME

Maximum Mark: 50

9694/12

May/June 2026

Published

This mark scheme contains the instructions and marking guidance that our examiners used to mark candidate responses for this component.

Before they start marking, examiners complete a standardisation process. They review a range of candidate responses and discuss the mark scheme in detail to agree which answers can and cannot be accepted. Examiners award marks where it is clear that candidate responses have met the requirements of the mark scheme. These requirements may vary between different components or different versions of the same component, depending on the exact requirements of the question and the candidate responses seen during the standardisation process.

Sometimes, our mark schemes may allow marks to be awarded to responses which contain elements that are factually incorrect or for content not covered by the syllabus. We do this in response to the demands of a specific question to support candidates and make sure that our assessments are fair. However, these allowances should not be used as a guide for teaching and learning.

We cannot discuss the mark scheme with schools, and we recommend that schools read the mark scheme together with the assessment material and the Principal Examiner Report for Teachers.

This document consists of **12** printed pages.

General marking principles

All examiners must apply these marking principles when marking candidate responses.

1	Examiners must award marks for each response in line with: - the specific content defined in the mark scheme - the specific skills defined in the mark scheme or in the level descriptions - the standard of response required as exemplified by the standardisation scripts.
2	Examiners must award whole marks (not half marks, or other fractions).
3	Examiners must award marks positively . This means that: - marks are not deducted for errors or omissions - marks are awarded for correct/valid answers as defined in the mark scheme and also for other valid answers which go beyond the scope of the syllabus and mark scheme referring to your team leader as appropriate - the quality of spelling, punctuation and grammar are judged only when the mark scheme indicates that these features are specifically assessed in the question. However, the meaning of all responses must be unambiguous.
4	Examiners must consistently apply the requirements of the mark scheme and any rules for what to do when candidates have not followed instructions correctly.
5	Examiners must use the full range of marks defined in the mark scheme, unless limited by the quality of the candidate responses seen.
6	Examiners must award marks according to the mark scheme and must not award marks with grade thresholds or grade descriptions in mind.

Annotations guidance for centres

Examiners use a system of annotations as a shorthand for communicating their marking decisions to one another. Examiners are trained during the standardisation process on how and when to use annotations. The purpose of annotations is to inform the standardisation and monitoring processes and guide the supervising examiners when they are checking the work of examiners within their team. The meaning of annotations and how they are used is specific to each component and is understood by all examiners who mark the component.

We publish annotations in our mark schemes to help centres understand the annotations they may see on copies of scripts. Note that there may not be a direct correlation between the number of annotations on a script and the mark awarded. Similarly, the use of an annotation may not be an indication of the quality of the response.

The annotations listed below were available to examiners marking this component in this series.

Annotations

Annotation	Meaning
	Correct item
	Incorrect item
	Individual mark of partial credit
	Double mark of partial credit
	Essential element of answer/working missing
	Judged to be not good enough to earn the relevant credit
	Benefit of doubt
	Correct follow through
	Transcription error
	Special case

Annotation	Meaning
SEEN	Working seen but no credit awarded; blank page checked
Highlighter	Use anywhere it is helpful to clarify the marking

NOTES FOR MARKERS**Working**

Where a final answer is underlined in the mark scheme, full marks are awarded for a correct answer, regardless of whether there is any supporting working, unless an exception is noted in the mark scheme.

For partial credit, the evidence needed to award the mark will usually be shown on its own line in the mark scheme, or else will be defined in italic text.

For explanations and verbal justifications, apply the principle of ‘words to that effect’.

Units

Unless required by the question or mark scheme, units such as \$ do not need to be seen to award the marks.

No response

If there is any attempt at a solution award 0 marks not NR. “-” or “?” constitute no attempt at a solution.

Abbreviations

The following abbreviations may be used in a mark scheme:

AG	answer given (on question paper)
awrt	answer which rounds to
dep	mark depends on earlier, asterisked (*), mark
FA	final answer
ft	follow through (from earlier error)
oe	or equivalent
SC	special case
soi	seen or implied

Question	Answer	Marks	Guidance
8(a)	Greatest time for repairs when 3 bicycles are sold, taking 20 minutes each, so number of minutes available is $540 - (3 \times 20) = 480$ [1] Most repairs when each takes 40 minutes, so number is $480/40 = 12$	2	
8(b)	10 bicycles sold each taking 30 minutes, leaving 240 minutes for repairs Amount taken in repairs = $240 \times \$0.50 = \$120$	1	
8(c)	10 bicycles sold each taking 20 minutes, leaving 340 minutes for repairs Amount taken = $10 \times \$240 + 340 \times \$0.50 = \$2400 + \$170 = \$2570$ <i>1 mark for \$2400 OR \$170</i>	2	
8(d)	Oliver worked for 540 minutes, income from repairs = $540 \times \$0.40 = \$216$, so Stan's income from his repairs = $\$406 - \$216 = \$190$ [1] Stan did repairs for $190/0.5 = 380$ minutes [1] Stan sold bicycles for $540 - 380 = 160$ minutes, so number of bicycles sold = <u>8</u>	3	

Question	Answer	Marks	Guidance																				
9(a)	\$ <u>216</u>	1																					
9(b)	<u>108</u>	1																					
9(c)	Four possibilities for using 46 cups of strawberries: <table border="1"> <thead> <tr> <th>12 small</th><th>9 large</th><th>rolls</th><th>cost (\$)</th></tr> </thead> <tbody> <tr> <td>1 (6)</td><td>10 (40)</td><td>102</td><td>486</td></tr> <tr> <td>3 (18)</td><td>7 (28)</td><td>99</td><td>423</td></tr> <tr> <td>5 (30)</td><td>4 (16)</td><td>96</td><td>360</td></tr> <tr> <td>7 (42)</td><td>1 (4)</td><td>93</td><td>297</td></tr> </tbody> </table> Only one of these has a cost of \$360, and this one makes <u>96</u> rolls <i>1 mark for finding any combination of small and large batches that uses 46 cups of strawberries</i> <i>1 mark for correct cost calculated for any of these</i> OR $3x + 5y = 360$ and $\frac{1}{2}x + \frac{4}{9}y = 46$ [2] $y = 36$ $x = 60$ <u>96</u> rolls	12 small	9 large	rolls	cost (\$)	1 (6)	10 (40)	102	486	3 (18)	7 (28)	99	423	5 (30)	4 (16)	96	360	7 (42)	1 (4)	93	297	3

5 (30)	4 (16)	96	360																				
7 (42)	1 (4)	93	297																				

Question	Answer	Marks	Guidance
10	<u>24</u> 1 mark for two correctly calculated trials Algebraic solutions: $4C = f$ $3(C + 4) = f + 4$ 1 mark for both equations $C = 8$ OR $4C + 4 = 3(C + 4)$ [1] $C = 8$	2	

Question	Answer	Marks	Guidance
11(a)	$7 + 1 + 8 = 16$ minutes	1	
11(b)	Cleaning will take $5 \times 12 \times 15$ mins or $250 + 250 + 250 + 150$ mins oe [1] She has to go down to change water when she is on floors 4, 7 and 10 [1] She has to go back up to floors 4, 7 and 11 with clean water and down from 12 Altogether, this will take her $3 + 6 + 9 + 11 + 3 + 6 + 10 = 48$ minutes [1] Plus the 3 minutes for changing water, which is 51 minutes in total. Total time is <u>951 min</u> = 15 hours 51 minutes.	4	Implied by 900 mins or 15 hours Implied by third mark

Question	Answer	Marks	Guidance
12	If all tickets were sold at full price the total would be $60 \times \\$30 + 40 \times \\$50 = \\$3800$ The total from discounts must therefore be \$310 [1] <i>1 mark for finding any combination of \$3 and \$5 which gives a total of \$310</i> 38 of the Premium seats were discounted and 40 of the Economy seats were discounted, so the total number of seats that were discounted is $38 + 40 = 78$	3	May see $310 = 3e + 5p$

Question	Answer	Marks	Guidance
13	Rachel played for 26 minutes Yvonne played for 52 minutes Jane played for 42 minutes <i>2 marks for the correct set of times</i> <i>1 mark for any set of three times satisfying the correct relationship</i> Jane replaced Rachel 26 minutes into the hour Yvonne replaced Jane $60 - 52 = 8$ minutes into the hour <u>09:08 and 09:26</u> are the times that the changes happened	3	R $Y = 2R$ $J = 2R - 10$
